DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/31/07 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 35-37 are rejected under 35 U.S.C. 102(b) as being anticipated by Enayati (U.S. Patent No. 6,290,701).

Enayati teaches a method of fixing a first piece of bone to a second piece of bone, comprising the steps of: providing a pin 170 having at least one laterally moveable distal anchor 171 and a lumen 174 extending therethrough; advancing the distal anchor 171 through the first piece of bone and into the second piece of bone while the distal anchor 171 is permitted to move laterally inwardly as needed (lines 11-14 of column 8), gripping with a deployment tool 210 a proximal portion of a wire 40/100/150

Art Unit: 3775

that extends axially through the lumen 174 (lines 38-40 of column 8); and proximately retracting with the deployment tool 210 the wire 40/100/150 axially through the lumen 174 such that a distal portion of the wire 40/100/150 resists radial inward deflection of the distal anchor 171, thereby locking the distal anchor 171 with respect to lateral inward movement (lines 45-49 of column 8). Once the wire passes through the point at 88 section 104 will pass through that point and retract back causing the wire to lock the distal anchor. The step of gripping a proximal portion of a wire includes gripping the proximal portion of the wire with a deployment tool. The step of proximally retracting the wire includes using a deployment tool to proximally retract the wire.

Allowable Subject Matter

Claims 3-10 and 27-34 are allowed.

Claims 38 and 39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Newly added claims 35-37 still read on the claims as recited above. All other rejections in the previous action have been overcome by the amendments submitted on October 31, 2007.
